Step 1:
Anesthesia- this will numb part of your mouth so you feel less pain.
Step 2:
Prepare mouth- the dentist will get the tooth ready. Identify the decayed tooth.
Step 3: Prepare tooth - the dentist will use tools in your mouth to remove the decay. The tools make loud noises and spray water. You might also feel pressure or vibration.
Step 4:
Cleaning of the tooth. The dentist will clean by adding a gel that tastes weird and acidic.
Step 5:
Fill and polish the tooth. The dentist will use a material to fill the tooth and might use a light to harden the material. The dentist will use Orange glasses during this process.
